

# NEW Air Tec<sup>®</sup> pad –

## now also available for System 3<sup>®</sup>

---

Focusing on high comfort and customer need, F&W invented a pad **with an air cushion system** which makes the pad even more comfortable to wear. Inside the anti-allergic silicone pad, there is a hollow chamber and an opening at one end. This creates an air cushion - the opening works like a valve enabling the pad to adjust itself automatically. To round off our product range we are offering the air cushion series now also for System 3 pad arms, matching also for frames made by chemical etching.

Match your elegant frames with highest comfort for the wearer!

**100% Made in Germany in our own facilities  
and with tested materials only**
